UNDERGRADUATE

Neural Networks

Data Structures and Algorithm's

Data Analysis

Web3 Dvelopment

SKILLS

PROGRAMMING

- Dsa in C++
- Supabase for backend
- Data Analysis using Python
- Leetcode 100+
- Neural Networks
- Web3 Dvelopment
- Project Management
- linear algebra
- Matrix
- Probability and Statistics

EXPERIENCE

MONARD BLITZ HACATHON | | 4rth prize winner

June-2025,Gurugram,India

HACK THIS FALL |

July 2025 | Delhi,India

PROJECTS

CRYPTO DASHBOARD

Built a crypto dashboard application using Python (front-end) and Supabase (back-end).

Implemented secure authentication with email verification for user login.

Designed a dashboard page to display real-time information about multiple cryptocurrencies.

Developed an account & wallet management section for users to track their details.

Currently working on enhancing the wallet module to support transactions and balance tracking.

DIGIT RECOGNIZER NEURAL NETWORK

Developed a neural network model in Python to classify handwritten digits (0–9).

Designed a deep learning architecture with two hidden layers and 87 neurons, using ReLU and sigmoid activation functions. Trained and evaluated the model on the MNIST dataset, achieving accurate digit recognition.

Implemented data preprocessing and normalization techniques to improve performance.

Gained hands-on experience in machine learning, deep learning, and neural network optimization.

DATA ANALYSIS ON KAGGLE

Analyzed a cryptocurrency dataset from Kaggle using Python (Pandas, NumPy, Matplotlib).

Performed EDA to study price trends, correlations, and volatility.

Visualized data with plots and heatmaps to extract key market insights.

ACHIEVEMENTS

2020	2022	Class X:90%	Class XII:91%
	2025	Monard Blitz Hackathon	4rth position

ADDITIONAL INFORMATION

Languages:

- English – Proficient (Professional working proficiency)
- Hindi – Proficient (Native/Bilingual proficiency)
